

Amendments to the specification:

Please amend the paragraph bridging pages 4-5 as follows:

Hub 16 also includes three identically configured openings 42 as the second fastening means. These second fastening means are configured in the shape of two parallel slots oriented in tangential direction 30. The slots are substantially right-angled and abut each other along part of one of their long sides. Openings 42 include a first retaining region 62 formed by the radially inward slot with a radial width 64 of 3.9 mm. In a releasing region 66 formed by the two slots, opening 42 has a radial width 68 of 7.1 mm. In a third region 70 which also belongs to releasing retaining region 66, radial width 72 of opening 42 is 3.4 mm. In tangential direction 30, each of the three openings 42 extends across an angular range 74 of approximately 60°. Openings 42 also include blocking elements 76 designed as bulges, each of which abuts the radially inner slot and extends into releasing region 66. Blocking elements 76, in turn, include a stop 78 provided to limit a releasing motion of fastening element 40 in opening 42.
